ROOM SERVICE

Flashpak™

Heated Meal Delivery System

Trying to keep room service deliveries piping hot will no longer be a problem. This system is designed to keep hot prepared foods at higher, safe food holding temperatures, for longer. The total system we offer includes rack, charger, holding unit and disc.

- **Versatile** - If a room service customer orders 2 courses, you can keep the second hot while they eat the first, or, you can keep a meal hot while getting it to the room.
- **Easy** - As room service is in a concentrated period several times a day, just preheat the non slip discs prior to service. When a meal comes off the bain marie, take the preheated disc from the holding box and re-charge in under a minute. The disc sits on the room service tray, and then the plate is put on top. You are now ready to serve a piping hot meal to the customer.
- **Safe** - Will only operate with a disc on the unit, even if it is turned on, due to the RFID chip inside each disc. The discs can also be handled while hot without burning yourself.
- **Fast** - The 26cm round disc heats in less than 4 minutes from cold, re-heating in under a minute.
- **Light** - does not require bulky or expensive hot boxes and room service trolleys which are impossible to use with stairs. The portable charger only weighs just over 9.5kg.
- **Compact** - eliminate costly storage space for room service trolleys and hot boxes.
- **Low power consumption** - 1800 W, 8 Amps - plug it in anywhere.
- **Smart** - The SmarTag (TM) technology allows for automatic temperature control, with constant self diagnosis. The system stops charging when the pre-set temperature is reached.
