NEW 'ISG' Combi - saving water in the kitchen

SPECIAL OFFER

I.S. what? ISG - Indirect Steam Generated. Well, whatever the new buzz term is, with water usage becoming an increasingly big issue, this machine will help you do your bit for the environment (and save \$\$ at the same time).

- 💧 Utilising up to 40% Less Water than a standard convection steam oven - 15lt of water per hour compared to 40+lt of others will add up to big savings over a year.
- 💧 Offers Indirect Steam Generation right up to full steaming, but does not have a boiler . . .
- 💧 . . . which means less maintenance. We have found that boilers are the component that are the biggest reason for service calls on combis.
- 💧 Rapid Cool Down Mode.
- 💧 Specially Shaped Interior cooking cavity for even cooking (takes up to 10 trays).
- 💧 Double Glazed Door with Tempered Glass, a safety must in a busy kitchen to avoid burning.
- 💧 Rounded Corners in Oven Chamber for easy cleaning.
- 💧 Easy To Use control panel and digital temperature display.
- 💧 Full Onsite Training by qualified chef.
- 💧 Semi-Automatic Cleaning cycle with one touch. Manual wash hose for cleaning via the operator.
- 💧 Electric, 18.5kW, three phase.
- 💧 Price includes oven, stand, wash hose and filter.
